

Chosen versus rejected

- A pair is an order, not a score out of 100.
- Label: $y_w \succ y_l$ given prompt x .

One preference row is a comparison, not a score out of 100

A reward model scores completions

A reward model is a classifier of “better completion,” trained on pairs

- Trained as a classifier of the better completion.
- Cheap to game if it is not the same as the human rater.
