

PRESENTATION AND FINAL REPORT ASSIGNMENT
ADVANCED MACHINE LEARNING
DATA 642

For the class project, you will have the opportunity to showcase your work and findings in an oral presentation. This presentation assignment aims to provide an overview of your project, highlight key aspects, and allow you to share your knowledge with your peers. Additionally, you will be required to write and submit a 5-page machine learning conference paper that delves deeper into your project's details and findings. Both the presentation and the paper will be important components of your project evaluation.

Instructions

1. Presentation Slides (10-15 slides):

- Create a visually appealing slide deck to support your oral presentation.
- Use appropriate headings, bullet points, images, and visuals to enhance understanding and engagement.
- Ensure that the slides provide a clear structure and flow for your presentation.
- Include an introduction, background, methodology, results, discussion, and conclusion sections in your presentation.

2. Oral Presentation (12 minutes):

- Prepare a concise and coherent oral presentation based on your slides.
- Allocate approximately 1-2 minutes per slide to ensure adequate coverage of all project aspects.
- Clearly explain the objectives, motivations, and research questions of your project.
- Present the methodology and techniques used in your project, highlighting any novel or unique approaches.
- Discuss your findings, including both quantitative and qualitative results.
- Analyze and interpret the results, providing insights into their implications and significance.
- Address any limitations or challenges encountered during the project.
- Conclude with a summary of your project's contributions and potential future research directions.

3. Machine Learning Conference Paper (5 pages):

- Write a comprehensive 5-page research paper based on your project.
- Follow the standard structure of a conference paper, including an abstract, introduction, related work, methodology, results, discussion, and conclusion sections.

- Ensure that the paper is well-organized, properly formatted, and free of grammatical errors.
- Include appropriate references and citations to support your work and acknowledge existing research in the field.

4. **Submission:**

- Submit your paper and presentation slides as separate files according to the submission guidelines provided.
- Submit the presentation slides as a PDF on the Canvas platform.
- Record and submit your oral presentation as a video recording through Canvas by the specified deadline.
- Follow the instructions provided for recording and uploading your presentation.

5. **Presentation Day:**

- On the scheduled presentation day, you will submit your recorded presentation through Canvas.
- Ensure that your recording is of good quality, with clear audio and visuals.
- Practice your presentation beforehand to ensure a smooth and confident delivery.
- Engage with your audience by delivering the presentation with enthusiasm and clarity.
- Anticipate and address potential questions or feedback in your recording.

Remember, the class project presentation and machine learning conference paper are crucial components for showcasing your work and sharing your insights with the class. Put effort into both the visual presentation and the written paper to demonstrate your understanding and expertise in the field of advanced machine learning.
