

Quiz 1 — Sample 2

DATA 412/612

Write your answers in an R script. You may use R and RStudio. You may **not** use the internet or your notes.

1. Write a function named `column_check` in an R script. It takes a data frame `df` with exactly two columns.
 - Return `FALSE` if either column is not numeric (`is.numeric`).
 - If both columns are numeric, compute their maximum values and return `1` if the maximum of the first column is greater than or equal to the maximum of the second column.
 - Otherwise, return `Second Column`.
