

Locate, then write

- ROME finds an MLP association and overwrites the value.
- One key. Not a new pretraining run.

Locate, then write. One key, not a new pretraining run.

A set is not a key

- Unlearning tries to forget documents while retaining the rest.
- Editing Paris is not unlearning a behavior.

Edit one association

Paris → ?
rewrite

Unlearn a set

documents to forget

everything else stays
