Quiz 3 — Sample 2

DATA 412/612

Write your answers in an R script. Load the tidyverse and use `stringr`. This is a second practice quiz, with questions only. You do not need lookahead or lookbehind. Vowels are `a`, `e`, `i`, `o`, and `u` (either case). Every other letter is a consonant.

1. Use `str_c()` on

```
x <- c("Ada", "Lin")
y <- c("Lovelace", "Chen")
```

   so the result is the single string `Ada Lovelace; Lin Chen`.

2. Produce a character string whose value is the ten characters

```
*^2$?9.|
```

   Call `str_replace()` once so that whole string becomes `abcdefghij`. The pattern must match those characters as themselves, not as metacharacters. Then start again from the original string and, with one `str_replace()` and capture groups, reverse the ten characters so the value is

```
|.9?$2^*
```

3. Find any six-letter word that starts with `s` or `b` (either case) and ends with `ing` or `ers`. Check your pattern on

```
c("Singers", "bakers", "baking", "STRING",
  "brings", "sing", "Singer")
```

4. Find any string that is three letters, a hyphen, one or two spaces, and then exactly four digits. Check your pattern on the vector below. `bos-  221` has two spaces after the hyphen. The `NYC` and `DC` strings have one.

```
c("NYC- 1021", "la -44", "DC- 2001", "bos-  221", "MIA-33101")
```

5. Find any run of at least four vowels in a row. The match should ignore case. Check your pattern on

```
c("queueing", "AeIoUxx", "strength", "cooeed", "myth", "BOOOK")
```

6. Find any run of at least three consonants in which the first is lowercase and the next two are uppercase. Later consonants in a longer run may be either case. Check your pattern on

```
c("aBcD", "xYYzz", "MNO", "bCDefg", "aei", "qRRs")
```

7. If a word ends in a vowel, move that vowel to the front. Leave the other words unchanged. Apply this to

```
c("time", "audio", "chart", "Ivy", "queue")
```

8. Find any word that starts with one capital letter, is 4 to 8 letters long, and ends with `ed` or `ly`. The letters after the first one are lowercase. Check your pattern on

```
c("Played", "Happy", "slowly", "A",
  "MARKEDLY", "Loved", "Ly", "Joined")
```
