

Lab 9: Strings and Regex

Build a quote from pieces, then write a few patterns.

Work in a **Quarto** document. Do **9.1** and **9.2** first. `words` comes with `stringr`.

```
library(tidyverse)
```

1. Pieces and replacement

1. From `full <- "To be or not to be, that is the question."`, use `str_sub()` to pull two pieces and `str_c()` to join them so `writelnLines()` prints a two-line quote.
 2. Replace `"back"` and `"lack"` with `"foo"` in one call. Run it on `c("back", "lack")` and on `c("back", "lack", "black")`.
-

2. Regular expressions

Use `words`. For each item, print the matching words.

1. Four-letter words that start with `a`.
2. Words that start with a vowel.
3. Words that end in `ed` but not `eed`.
4. Words that start with three consonants.
